

```
package root;
```

```
public class StringConverter {  
    public static void main(String[] args) {  
        // Create a string  
        String str = "Hello World!";  
  
        // Convert the string to StringBuffer  
        StringBuffer sb = new StringBuffer(str);  
  
        // Convert the string to StringBuilder  
        StringBuilder sbd = new StringBuilder(str);  
  
        // Display the original string and the converted string  
        System.out.println("Original string: " + str);  
        System.out.println("StringBuffer: " + sb);  
        System.out.println("StringBuilder: " + sbd);  
    }  
}
```
